

Kastus® and Dawar Technologies launch touchscreen partnership

[Dawar Technologies](#) to integrate Kastus' patented antiviral and antimicrobial coating technology into their portfolio offering of next gen touchscreen products.

Dawar Technologies is a full turn-key solution provider of projected capacitive and resistive touch enabled UI systems and custom product enhancement and integration services for the medical, industrial, instrumentation, military, aerospace, in-vehicle controls, POS/Kiosk, and marine markets.

They are committed to strengthening their position in the market by focusing their Research and Development efforts on Touch and Touchless enabled user interface and continuously innovating to meet the ever-changing demands of the

market. Dawar Technologies are dedicated to partnering with and launching new cutting-edge technologies designed to help fight the global spread of the Coronavirus.

“The Dawar team is very excited to announce our new technology partnership with Kastus. Since the world was flipped on its head the beginning of this year with the global fight against Covid-19, Dawar has been in search of new exciting technology partnerships with class leading suppliers that are true innovators and game changers. Kastus brings us and our strategic customers a piece of mind that their touch-enabled solutions are protected against the human coronavirus. The wonderfully unique features about the Kastus product is that it serves all of our critical verticals and can be used in fully customized solutions as well as our standard monitor and AIO product offering.”

David Ashi
VP Sales and Marketing at Dawar Technologies

Kastus® are experts in the field of Antimicrobial and Antiviral surface coating technologies since 2014. Our patented coating technology uniquely delivers always active double protection against both Bacteria and Viruses, including

human coronavirus. Kastus offer a portfolio of products from touchscreen glass and screen protectors to coating solutions for all types of new glass manufacturing. Kastus coating technology can be integrated into new screens and is also available as an aftermarket antimicrobial & antiviral tempered glass screen protector that can be retrofitted to protect existing displays in the field.

“In this moment, Antiviral & Antimicrobial coatings are vital solutions to help give consumers and professional staff an enhanced level of protection when using shared touch screens. The Kastus patented 24/7 Antimicrobial & Antiviral coating technology offers enhanced, built-in screen protection and gives consumers / professional users the added confidence to interact with shared screen areas. We are excited to announce this new partnership with market innovators such as Dawar Technologies who share our vision to help make the touch technology world a safer place”

John Browne
Chief Executive Officer of Kastus
